**GAH Transport Refrigeration:** setting the standard from design to installation and after-sales service

# BETTER BUSINESS ALL ROUND

“Our extensive range of transport refrigeration systems is constantly being developed to help alleviate rising fuel costs, accommodate concerns for the environment and ultimately meet the demands of our customers.”

John Reader, *Managing Director*

## GAH

GAH is an independent, UK-based company specialising in the manufacture of direct-drive transport refrigeration. With nearly twenty years experience in the industry, GAH is aware of the pressures facing the transport industry; to drive down fuel costs and adapt to our crowded road systems whilst reducing the impact on our environment.

## Innovative Systems

We continually develop our range of systems, so that they meet these challenges and reflect the varying nature and size of our customers' businesses. This focus has culminated in a range of products for a wide range of vehicles where it is possible to reduce your fuel bill by up to 10% whilst reducing your carbon and noise emissions and electrical consumption.

## Built in Britain

We are proud of our reputation for providing exceptional build standards from our factory in East Anglia where we oversee quality control and have built up an experienced and highly skilled production team. We also provide unparalleled maintenance support from our team of mobile service engineers who operate throughout the UK and from our call-centre here in Suffolk.

## Contact us

To learn more about our products and to discuss the best options for you, please call us on 01394 421140.

# GREENER AND MEANER

“Energy efficiency has a real impact on our customers’ profitability, that’s why GAH are producing systems that offer genuine savings for the operator and the environment. What’s not to like?”

Shaun O'Farrell, Refrigeration Director

It's a tough time to be in the transport business with crowded road systems, tight budgets and spiralling fuel costs. With nearly twenty years in the industry we use our knowledge and experience to design and develop refrigeration systems with the functionality to meet these challenges head on.

#### The GAH range

GAH systems can carry temperature sensitive goods for chill, freeze and heat applications in single or multi-compartment suitably insulated vehicles.

- The Lance and Arrow models for small and medium vans are a benchmark for efficiency and flexibility
- The all-new Rapier and Super Rapier models are lighter and more powerful and are suitable for a wide variety of vehicles
- Our box body units are available in one and two piece variants and fit small to medium sized box body vehicles

The Fuel Saver (FS) range include our patented air management kits; designed in conjunction with leading airflow management specialists at Cranfield University to direct airflow around the box yet still through the unit's coil. Whereas some deflectors starve the fridge unit of air, decreasing the fridge's performance, the GAH

FS systems manage the airflow for optimum cooling and fuel efficiency.

#### GAH new innovations

- Scroll standby compressors that consume less electrical power than conventional systems
- DC power supplies that are lighter and supply a smooth 12 or 24 volt supply for enhanced component life
- Reduced pipework helping to reduce weight and gas levels
- New, more robust road compressors to cope with increased engine bay temperatures
- Air management kits
- All-new Lance models (L200 and L201) that take their power from the vehicle's crankshaft and have an optional single phase standby
- The J500 is an all-new lightweight 5KW unit to replace and upgrade the current Excalibur range. Available with or without standby, 12 or 24 volts and single or three-phase
- The EX700 is an all-new 7KW box body unit for 12-18 tonne applications. 24 volts only, with or without three-phase standby

For the most efficient system to suit your requirements, talk to one of our application specialists. Call 01394 421140 for more details.

#### FS BY NAME, FUEL SAVING BY NATURE

- Reduce your fuel bill by up to 10%
- Reduce your carbon emissions
- Reduce your standby noise levels
- Reduce your electrical consumption
- Increase your profitability

# BUILT IN BRITAIN

Lance (L200)

Super Rapier (SR350)

Javelin (J500)

Excalibur (EX700)

“Because we manufacture all of our refrigeration systems here in the UK, we’re on hand whether you need support or maintenance. That’s the strength of the GAH Service organisation - it means personal attention.”

Barry Dinsdale *Service Manager*

#### Specialist Production Team

We choose to build all our systems here in the UK, simply because we believe we get a better product that way. This has allowed us to develop a highly skilled production team who also support our mobile service engineers. We have a range of maintenance options, which have been designed to suit the diversity of our customers’ applications, but all aim to provide the reassurance you need and help to control the budget.

#### Nationwide Service Engineers

Our network of engineers operate nationwide and are individually trained to work on the GAH range of systems. As refrigeration engineers, they are also able to repair and maintain other systems. This may be useful if your fleet operates with a variety of refrigeration products or if you’re thinking of phasing in GAH systems but want only one maintenance contract.

#### Benefits of GAH maintenance support

- 24/7 UK-based call centre
- Our engineers’ vans are mobile workshops, stocked with a full complement of replacement components
- On the rare occasion that a component is not available on one of our vans, a replacement is only hours away
- We come to your site to service and attend breakdowns at a time convenient to you
- We strive to achieve a fix on the first visit
- Our engineers have the latest PDA systems and can produce electronic work reports
- We aim for a four-hour response time for Gold customers

To discuss our maintenance options and find out which is best for you, please call us on 01394 421140.

#### MAINTENANCE OPTIONS

Service support is based around GAH ONE CALL, providing customers with a single contact number enabling us to offer the best service available.

#### Gold Shield

Our most popular package is Gold Shield. Paid monthly (fixed for 2-5 yrs), the contract covers two scheduled services per year. All parts, labour, travel and breakdowns are included in working hours (8am-6pm Monday to Friday, excluding bank holidays).

We also offer a 24/7/365 Platinum package. Please call to discuss availability.

#### Bronze Shield

For a fixed monthly fee, GAH will service your system twice per year. Bronze contracts are reviewed and renewed annually and all work (incl breakdowns) is carried out in working hours (see Gold Shield).

#### Pay As You Go

To comply with the warranty, your system must be serviced twice per year. Our PAYG charges cover the service and travel (up to 2 hours).

All GAH systems carry a minimum one year warranty, which is subject to certain conditions. Please call for further information.
