Solarsure™

design, supply, installation support, accreditation

Viridian Solar is alongside you every step of your project from design through to completion and handover. The Solarsure service ensures solar installations of the highest quality, providing access to government support mechanisms. At the same time, it enables you to maintain clarity of responsibility. With on-site training from Viridian Solar, roofing, plumbing and electrical subcontractors perform their elements of the solar installation. Viridian Solar inspects installations, issues a handover pack for residents and certifies that the installations are in accordance with the Microgeneration Certification Scheme (MCS).

Design Study

Design

Viridian Solar's technical specialists work in partnership with your design team to help you achieve your energy performance goals.

Specification

Designs and energy reports can be used to demonstrate compliance with planning conditions. Advice to Code for Sustainable Homes assessors results in optimised solar designs that provide best value.

Supply

Installation

Delivery of solar equipment from our UK factory is coordinated to suit your programme.

Site Training

Viridian Solar provides on-site installation training for roofers, plumbers and electricians who can then undertake the installation and commissioning of the systems following the designs supplied by Viridian Solar.

Quality Control

A representative sample of installations are inspected by Viridian Solar to ensure that quality standards are maintained throughout the programme.

Handover

Documentation is compiled throughout to provide an audit trail for MCS accreditation.

Accreditation

Completion and Accreditation

Viridian Solar provides a solar information pack for every dwelling in the programme, containing simple information on operation and maintenance of the system plus an MCS certificate.

The installations are registered with the MCS administrators, giving the client access to renewable energy incentive schemes.
